

In-season transfer decision reminder — HTML email

Table-based layout (candidate a) plus an inline-SVG starting-XI pitch diagram (candidate b), with all three risk profiles as stacked cards. Two client renders below show the intended degradation: the diagram survives in Apple Mail / Gmail, and drops silently—table shell and badges intact—in Outlook desktop.

Full render Apple Mail / Gmail — SVG pitch diagram renders

CONSERVATIVE

HOLD

Keep your XI unchanged — no transfer clears the projected-points bar this week.

Captain	Haaland
Projected pts (incl. captain)	10.8
Bank after	£2.3m
Free transfers next GW	2

BALANCED · DEFAULT

ROLL

Bank the free transfer — save it for a clearer upgrade next gameweek.

Captain	Haaland
Projected pts (incl. captain)	11.4
Bank after	£2.3m
Free transfers next GW	1

AGGRESSIVE

TRANSFER · -4

Take the hit — the swap's projected gain clears the 4-point cost.

OUT: Isak

IN: Wood

Captain	Haaland
Projected pts (incl. captain, net of hit)	12.1
Net gain vs. holding	+1.3
Bank after	£1.8m
Free transfers next GW	1

Degraded fallback

Outlook desktop (Win32) — inline <svg> is dropped; table shell + badges are unaffected

Deadline in 3h: Gameweek 7 transfer decision

Sat 8/9/2026 11:30 AM

GAMEWEEK 7 · DEADLINE IN 3H

(starting-XI diagram not shown in this client)

CONSERVATIVE

HOLD

Keep your XI unchanged — no transfer clears the projected-points bar this week.

Captain	Haaland
Projected pts	10.8

BALANCED · DEFAULT

ROLL

Bank the free transfer — save it for a clearer upgrade next gameweek.

Captain	Haaland
Projected pts	11.4

AGGRESSIVE

TRANSFER · -4

Take the hit — the swap's projected gain clears the 4-point cost.

Notes for review

- Colors are literal hex values lifted from the plan's cited dashboard badge palette (roll / hit / info), not CSS variables — per the plan, custom properties aren't safe in email.
- Layout is nested `<table role="presentation">`, no flexbox/grid, matching candidate (a)'s reliability argument.
- The pitch diagram is a raw inline `<svg>` (not a data-URI `<img>`) so it degrades cleanly rather than showing a broken-image glyph.
- Per-profile actions shown independently (hold / roll / transfer with hit) since the companion issue proposes surfacing all three at once.
